

DNA RULE

Remember DNA letters always pair in the same way:

HOW TO MAKE A DELICIOUS DNA HELIX

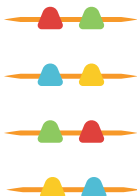

- 1 Choose 4 different coloured sweets (e.g. green, red, yellow and blue) sort them into four piles, a pile for each colour.

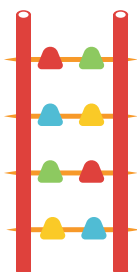

- 2 Pair two colours together (blue with yellow and red with green). These are your DNA bases!

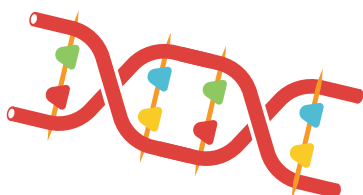

- 3 Push the two sweets onto the cocktail stick, like a sweet kebab. Leave a small gap between the sweets. Make at least 6 kebabs with the different coloured sweets.

- 4 Spread the kebabs out in a line one above the other, make sure there is a space of one or two fingers between each kebab.

- 5 Place the long cable sweets along the sides of the kebabs. It should look like a ladder now. Push the cable onto the cocktail sticks.

- 6 Finally twist your helix. You have made a DNA helix. Yum!.
